EDUCATION

Northeastern University

Boston, Massachusetts

- B.S. in Computer Science – AI Concentration (Expected Graduation: 5/27)
- **Coursework:** Data Structures & Algorithms, Foundations of Cybersecurity, Program Design & Implementation I & II, Object-Oriented Programming, Discrete Mathematics, Foundations of Data Science, Linear Algebra, Multivariable Calculus

TECHNICAL SKILLS

Languages: Python, C++, SQL, Java, C#, JavaScript, TypeScript, Bash, HTML/CSS, Swift

Frameworks & Libraries: NumPy, Pandas, Scikit-learn, PyTorch, TensorFlow, Matplotlib, Flask, React, Statistical & Predictive Analysis

Platforms & Cloud: Linux, AWS, Azure, Git, Agile (Scrum), CI/CD, REST APIs, Docker

Development Tools & Methodologies: Agile (Scrum), SDLC, Application Resiliency, Multithreaded Programming, Concurrency, Git

Certifications: AWS Certified Cloud Practitioner, Python Certified Developer (PCEP-30-01), Microsoft Azure AI Fundamentals, MySQL Developer, Unity Game Development Specialization, Database for Full Stack Development

RESEARCH EXPERIENCE

University of Texas at Dallas

Dallas, Texas

Research Intern (Multimodal Interactions Lab)

May 2024 – December 2024

- Conducted applied research on **distributed XR systems**, integrating **haptic feedback with data visualization** while analyzing **system responsiveness** under real-time constraints.
- Designed and implemented **real-time IoT spatial synchronization pipelines** to ensure consistent, **fault-tolerant state sharing** across a distributed XR platform.
- Profiled **system latency and reliability** under **concurrent workloads** using **diagnostic analytics** to optimize performance.

INDUSTRY EXPERIENCE

Oasis at Northeastern (oasisneu.com)

Boston, Massachusetts

Software Engineer

May 2026 – Present

- Architected a **full-stack sentiment analysis platform** covering 5,000+ stocks using **FinBERT and VADER NLP** models deployed on a Flask + PostgreSQL backend with a React frontend.
- Implemented **Redis caching** to eliminate redundant **NLP inference calls**, cutting pipeline latency at scale.
- Integrated Reddit and Twitter APIs to build a real-time **data ingestion pipeline**, enabling **continuous sentiment signal generation** across equity markets.

DeKalb County (dekalbcountyga.gov)

Decatur, Georgia

Software Engineering Intern

June 2023 – July 2023

- Built and automated **secure, fault-tolerant ETL pipelines** supporting Oracle EBS systems, **reducing synchronization errors and pipeline failures** by 90%.
- Built **CI/CD-integrated automation tools**, improving **deployment reliability** and **observability** across release pipelines.
- Collaborated in **Agile sprints** using **Git-based workflows** to maintain **code quality** and **system uptime across releases**.

PROJECTS

EnvisionVR – Distributed XR Simulation Platform

- Engineered a **distributed, event-driven simulation platform** supporting **concurrent users** and real-time **state management**.
- Architected **concurrency-safe pipelines** with **dynamic plugin loading** and **decoupled input, state, and rendering** logic to ensure system stability under load.
- Implemented **async handling** and **caching** to deliver **sub-second responses** under concurrent user load.

MovieMind – Low-Latency Recommendation Engine

- Developed Flask-based REST APIs integrating TF-IDF and SVD models for **real-time predictive analytics**.
- Designed a thread-safe persistence layer with SQLite, optimized for concurrent model loads and **high-throughput inference**.
- Automated **ETL pipelines** for large TMDb datasets, ensuring **data integrity** and cutting model update time by **60%**.

StyleForecast – Context-Aware Recommendation System

- Created a **real-time, weather-based outfit recommendation engine** with a **modular backend architecture**.
- Implemented **context-driven classification logic** and modular routing to deliver personalized, **data-driven suggestions**.
- Integrated **external APIs** and **optimized query performance** to ensure **instant response** to varying user contexts.
